

BRAEMAR ENERGY VENTURES – ASSOCIATE JOB DESCRIPTION

COMPANY: This top tier venture firm, with headquarters in New York and offices in Boston and London, is widely recognized as one of the leading partnerships focused on next-generation energy technology. The principals have backed many of the energy industry's leading technology companies and have enjoyed several IPO and M&A exits in the last few years. The partnership runs a balanced technology portfolio with a particular emphasis on early- to mid-stage opportunities. The firm has a cohesive group of individuals who value teamwork, rigid analysis, and the ability to actively assist their portfolio companies following the investment through the firm's Board participation and often lead investor role with the companies which it backs.

ROLE: We are looking for an Analyst/Associate to start as soon as possible in New York. Technology and engineering experience relevant to energy or the industrial technology sector is a strong preference, along with solid investment banking or strategy consulting training. The desired candidate should be fully skilled in modeling and financial analysis as well as experienced in doing research on new markets. Energy technology is becoming a leading area for venture capital and corporate investment with an enormous opportunity to create a large-scale impact on the global economy. As a result, the individual being considered should share the passion of the firm's principals for the sector.

The candidate should be an organized self-starter who can help immediately with the organization of the firm's internal processing of information, build databases, do industry research, and build financial models, yet should also be comfortable working directly with partners on transactions and on portfolio matters with company management.

REQUIREMENTS

- 1-3 years of work experience at a top-tier investment bank or strategy consulting firm
- Strong academic performance in undergraduate-level with technical and/or laboratory coursework in the hard sciences preferred
- Genuine interest in VC investing in energy technology
- Business analytical ability, including financial analysis skills that could be easily demonstrated in a case study interview

START DATE: Immediate.

TENURE: While most Associates will remain with the firm for two or three years before going on to develop operating experience at an energy technology company or attending graduate school, past Associates at the firm who have performed exceptionally well have been directly promoted on to post-MBA roles within the firm.

COMPENSATION: Competitive with venture firms of a similar size.

WORK AUTHORIZATION: Candidates must already be authorized to work in the US.
